Walking With The Great Apes:

Walking with the Great Apes Sy Montgomery, 2009-08-25 From the personal to the primate Sy Montgomery acclaimed author of *The Soul of an Octopus* and *The Good Good Pig* explores the science wisdom and living experience of three of the greatest scientists of the twentieth century Three astounding women scientists have in recent years penetrated the jungles of Africa and Borneo to observe nurture and defend humanity's closest cousins Jane Goodall has worked with the chimpanzees of Gombe for nearly 50 years Diane Fossey died in 1985 defending the mountain gorillas of Rwanda and Birutė Galdikas lives in intimate proximity to the orangutans of Borneo All three began their work as protégées of the great Anglo African archeologist Louis Leakey and each spent years in the field allowing the apes to become their familiars and ultimately waging battles to save them from extinction in the wild Their combined accomplishments have been mind blowing as Goodall Fossey and Galdikas forever changed how we think of our closest evolutionary relatives of ourselves and of how to conduct good science

Walking with the Great Apes Sy Montgomery, 2009-08-25 *Walking With the Great Apes* Sy Montgomery, 1991-01 Studies the work and unique methods of three women scientists who contributed to understanding chimpanzees mountain gorillas and orangutans

Walking with the Great Apes: Jane Goodall, Dian Fossey, Birute Galdikas, **The Great Apes** Robert Mearns Yerkes, Ada Watterson Yerkes, 1929 **Unforgotten** Anita Silvey, 2021-06-29 This dramatic conclusion to Leakey's *Trimates* will inspire the next generation of scientists and conservationists as they meet Dian Fossey who studied and protected her beloved gorillas from poachers and other threats until her murder in 1985

The Madame Curie Complex Julie Des Jardins, 2010-10-06 Why are the fields of science and technology still considered to be predominantly male professions The *Madame Curie Complex* moves beyond the most common explanations limited access to professional training lack of resources exclusion from social networks of men to give historical context and unexpected revelations about women's contributions to the sciences Exploring the lives of Jane Goodall Rosalind Franklin Rosalyn Yalow Barbara McClintock Rachel Carson and the women of the Manhattan Project Julie Des Jardins considers their personal and professional stories in relation to their male counterparts Albert Einstein Robert Oppenheimer Enrico Fermi to demonstrate how the gendered culture of science molds the methods structure and experience of the work With lively anecdotes and vivid detail The *Madame Curie Complex* reveals how women scientists have often asked different questions used different methods come up with different explanations for phenomena in the natural world and how they have forever transformed a scientist's role

Young, 2015-08-28 We exist at a moment during which the entangled challenges facing the human and natural worlds confront us at every turn whether at the most basic level of survival health sustenance shelter or in relation to our comfort driven desires As demand for resources both necessary and unnecessary increases understanding how nature and culture are interconnected matters more than ever Bridging the fields of environmental history and American studies Rendering Nature examines the surprising interconnections between nature and culture in distinct places times and contexts over the course of American history Divided into four themes animals bodies places and politics the essays span a diverse array of locations and periods from antebellum slave society to atomic testing sites from gorillas in Central Africa to river runners in the Grand Canyon from white sun tanning enthusiasts to Japanese American incarcerated taxidermists at the 1893 World's Fair to tents on Wall Street in 2011 Together they offer new perspectives and conceptual tools that can help us better understand the historical realities and current paradoxes of our environmental predicament Contributors Thomas G Andrews Connie Y Chiang Catherine Cocks Annie Gilbert Coleman Finis Dunaway John Herron Andrew Kirk Frieda Knobloch Susan A Miller Brett Mizelle Marguerite S Shaffer Phoebe S K Young The Mentalities of Gorillas and Orangutans Sue Taylor Parker, Robert W. Mitchell, H. Lyn Miles, 1999-08-26 Research on the mental abilities of chimpanzees and bonobos has been widely celebrated and used in reconstructions of human evolution In contrast less attention has been paid to the abilities of gorillas and orangutans This 1999 volume aims to help complete the picture of hominoid cognition by bringing together the work on gorillas and orangutans and setting it in comparative perspective The introductory chapters set the evolutionary context for comparing cognition in gorillas and orangutans to that of chimpanzees bonobos and humans The remaining chapters focus primarily on the kinds and levels of intelligence displayed by orangutans and gorillas compared to other great apes including performances in the classic domains of tool use and tool making imitation self awareness social communication and symbol use All those wanting more information on the mental abilities of these sometimes neglected but important primates will find this book a treasure trove **The Invisible Hand** Matthew R. Longo, 2025-04-15 How the invisible hand of the nervous system makes the human hand such an evolutionary success The hand has a central role in both human evolution and cultural development in our descent and in our ascent It is Immanuel Kant said the visible part of the brain It is the invisible that concerns Matthew Longo in The Invisible Hand a wide ranging deftly written account of the neural and cognitive mechanisms that have made a seemingly ordinary physical appendage an extraordinary tool in the evolution of humanity The hand has been the focus of an enormous amount of research from a dizzying range of disciplines from anatomy psychology and neuroscience to evolutionary biology and archaeology With the concept of the invisible hand Longo integrates and contextualizes the findings from these disparate fields to show how the neurocognitive mechanisms that comprise the invisible hand are central to understanding a wide array of phenomena including basic sensory and motor

function space perception gesture and even the self More generally he contends that the extraordinary abilities of the hand arise precisely from the complementary nature and tight integration of the visible and invisible hands a proposition that leads deep into topics as diverse as haptics tool use handedness phantom limbs and evolution His work elucidates and significantly expands a key chapter of the story of human evolution and culture as manifested in the human hand **Undaunted** Anita Silvey,2019 As a young scientist Galdikas had a mission to find and study the elusive orangutans of Borneo s rain forest to help protect this amazing and elusive species Award winning author Silvey explores the life and legacy of this incredible and little known primatologist Full color Understanding Mammalian Locomotion John E. A. Bertram,2016-01-19

This is a captivating evolutionary narrative of the human body exploring the pivotal traits that make humans unique as a species It provides a better understanding of why we look the way we do through an evolutionary morphological lens by delving into the functional explanations for the unique characteristics of us and our ancestors and the evolutionary pathways that shaped them It integrates changes in anatomy with functional shifts but also with underlying genetic and environmental transformations that drove our evolution The main body of the book focuses around four fundamental themes that have evolutionarily sculpted us into who we are today ever since the shared origin with the chimpanzee diet brain locomotion and skin This book not only promises to enrich our understanding of human evolution but also challenges us to reconsider what it means to be human in light of our ancient lineage and ongoing evolutionary journey It also Provides a complete overview of the major events of human evolution Helps readers understand why our body has been shaped the way it is Integrates genes anatomy function behavior and ecology creating a more complete picture written in an accessible text while incorporating many facts and figures building upon both historic and recent literature Offers an up to date view of how anthropologists currently see our evolution Focuses on four fundamental changes in the brain diet skin and locomotion Explains some aspects of what humans are experiencing today e g why some people are lactose intolerant *Darwin's Legacy* Sue Taylor
