Vehicle Dynamics, Stability, and Control Dean Karnopp, 2016-04-19 Anyone who has experience with a car bicycle motorcycle or train knows that the dynamic behavior of different types of vehicles and even different vehicles of the same class varies significantly For example stability or instability is one of the most intriguing and mysterious aspects of vehicle dynamics Why do some motorcycles sometimes exhibit a wobble of the front wheel when ridden no hands or a dangerous weaving motion at high speed Why does a trailer suddenly begin to oscillate over several traffic lanes just because its load distribution is different from the usual Other questions also arise How do humans control an inherently unstable vehicle such as a bicycle and how could a vehicle be designed or modified with an automatic control system to improve its dynamic properties Using mainly linear vehicle dynamic models as well as discussion of nonlinear limiting effects *Vehicle Dynamics Stability and Control Second Edition* answers these questions and more It illustrates the application of techniques from kinematics rigid body dynamics system dynamics automatic control stability theory and aerodynamics to the study of the dynamic behavior of a number of vehicle types In addition it presents specialized topics dealing specifically with vehicle dynamics such as the force generation by pneumatic tires railway wheels and wings The idea that vehicles can exhibit dangerous behavior for no obvious reason is in itself fascinating Particularly obvious in racing situations or in speed record attempts dynamic problems are also ubiquitous in everyday life and are often the cause of serious accidents Using relatively simple mathematical models the book offers a satisfying introduction to the dynamics stability and control of vehicles

Vehicle Dynamics and Control Rajesh Rajamani, 2011-12-21 Vehicle Dynamics and Control provides a comprehensive coverage of vehicle control systems and the dynamic models used in the development of these control systems The control system applications covered in the book include cruise control adaptive cruise control ABS automated lane keeping automated highway systems yaw stability control engine control passive active and semi active suspensions tire road friction coefficient estimation rollover prevention and hybrid electric vehicles In developing the dynamic model for each application an effort is made to both keep the model simple enough for control system design but at the same time rich enough to capture the essential features of the dynamics A special effort has been made to explain the several different tire models commonly used in literature and to interpret them physically In the second edition of the book chapters on roll dynamics rollover prevention and hybrid electric vehicles have been added and the chapter on electronic stability control has been enhanced The use of feedback control systems on automobiles is growing rapidly This book is intended to serve as a useful resource to researchers who work on the development of such control systems both in the automotive industry and at universities The book can also serve as a textbook for a graduate level course on Vehicle Dynamics and Control

The Bicycle and Motorcycle Dynamics BMD Conference is held every three years. The first conference was held in Delft, The Netherlands, in 2010. The aim of this symposium is to bring together leading scientists and researchers in the field of bicycle and motorcycle dynamics and control in a broad sense. Topics include but are not limited to: single-track vehicles (e.g., bicycles, motorcycles, scooters, narrow-track and tilting vehicles, unicycles, dicycles, e.g., Segways and hoverboards), modeling, kinematics and dynamics, control, human control, rider properties, handling qualities, tires, experiments, aerodynamics, simulators, nonholonomic dynamics, robot riders, path following. For an open sharing of information, the meeting is organized to provide as much interaction between participants as possible. The format is informal and fluid, with a single track of presentations and extensive time scheduled for interaction and the forming and sharing of ideas.
