Waking Dreaming Being Self And Consciousness In Neuroscience Meditation And Philosophy:

Waking, Dreaming, Being Evan Thompson, 2014-11-11 A renowned philosopher of the mind also known for his groundbreaking work on Buddhism and cognitive science Evan Thompson combines the latest neuroscience research on sleep dreaming and meditation with Indian and Western philosophy of the mind casting new light on the self and its relation to the brain Thompson shows how the self is a changing process not a static thing When we are awake we identify with our body but if we let our mind wander or daydream we project a mentally imagined self into the remembered past or anticipated future As we fall asleep the impression of being a bounded self distinct from the world dissolves but the self reappears in the dream state If we have a lucid dream we no longer identify only with the self within the dream Our sense of self now includes our dreaming self the I as dreamer Finally as we meditate either in the waking state or in a lucid dream we can observe whatever images or thoughts arise and how we tend to identify with them as me We can also experience sheer awareness itself distinct from the changing contents that make up our image of the self Contemplative traditions say that we can learn to let go of the self so that when we die we can witness the dissolution of the self with equanimity Thompson weaves together neuroscience philosophy and personal narrative to depict these transformations adding uncommon depth to life's profound questions Contemplative experience comes to illuminate scientific findings and scientific evidence enriches the vast knowledge acquired by contemplatives

Interreligious Perspectives on Mind, Genes and the Self Joseph Tham, Chris Durante, Alberto García Gómez, 2018-10-26 Attitudes towards science medicine and the body are all profoundly shaped by people's worldviews When discussing issues of bioethics religion often plays a major role In this volume the role of genetic manipulation and neurotechnology in shaping human identity is examined from multiple religious perspectives This can help us to understand how religion might affect the impact of the initiatives such as the UNESCO Declaration in Bioethics and Human Rights The book features bioethics experts from six major religions Buddhism Confucianism Christianity Islam Hinduism and Judaism It includes a number of distinct religious and cultural views on the anthropological ethical and social challenges of emerging technologies in the light of human rights and in the context of global bioethics The contributors work together to explore issues such as cultural attitudes to gene editing neuroactive drugs the interaction between genes and behaviours the relationship between the soul the mind and DNA and how can clinical applications of these technologies benefit the developing world This is a significant collection demonstrating how religion and modern technologies relate to one another It will therefore be of great interest to academics working in bioethics religion and the body interreligious dialogue and religion and science technology and neuroscience

The Art of Becoming Infinite Gabriella Stanchina, 2025-01-27 Mou Zongsan is arguably the most important Chinese philosopher of the twentieth century This work delves into the philosopher's exploration of self and subjectivity setting Mou Zongsan's theories against Western paradigms Mou contrasts Western horizontal model based on the separation of subject and object and aimed at cognitive enhancement

with the vertical view dominant in the Confucian and Daoist tradition The vertical model has at its core a practical performative interpretation of the subject based on the moral self cultivation This spiritual cultivation enables the finite human being to become infinite embodying the original unlimited moral mind that constitutes the Self and the universe In addressing fundamental questions of self consciousness and self identity the book contextualizes Mou s philosophy within contemporary discussions in neuroscience and cognitive science By placing Mou s ideas in dialogue with Western thought examining thinkers like Husserl Kant Hegel and Levinas as well as with Daoist and Confucian vision of mind this work opens a pathway to understanding selfhood beyond purely epistemological boundaries This book will be of interest to readers and scholars interested in the contemporary debate about mind and the Self as well as those intrigued by the new horizons opened by a cross cultural Western Chinese approach to subjectivity

Performing Human Consciousness Vanessa Dodd, 2024-09-30 Is the mind like a theatrical performance This comparison has often been used as a conceptual tool by neuroscientists philosophers and psychologists in trying to understand what constitutes the human mind and in particular how the comings and goings and the character transformations on the stage and in the scripted text give us visible access to the hidden workings of the human mind Performing Human Consciousness makes use of this metaphor to explore the variety of ways in which the private thoughts and feelings we all have bring into play many aspects of persistent philosophical questions over how the essentially private world of personal experiences can relate to and communicate with the common public world To investigate this generalisation in more detail the author brings into play her own conscious experiences by making use of an auto inscribed play Being Me Through this dramatic medium she seeks to show in detail how phenomenal consciousness is captured through the dramatic play text and thereby made known to others through performance of that text Broadening out her argument further the author then embarks on an enquiry into a selection of play texts from an historical variety of perspectives from the early Greek and Mediaeval dramas through to the Symbolist period and onwards to the present day demonstrating the variety of ways in which they illustrate her argument This book will be of great interest to students and scholars of theatre performance and scriptwriting

Beckett and the Cognitive Method Marco Bernini, 2021 How can literature enhance parallel or reassess the scientific study of the mind Or is literature instead limited to the ancillary role of representing cognitive processes Beckett and the Cognitive Method argues that Beckett s narrative work rather than just expressing or rendering cognition and mental states inaugurates an exploratory use of narrative as an introspective modeling technology defined as introspection by simulation Through a detailed analysis of Beckett s entire corpus and published volumes of letters the book argues that Beckett pioneered a new method of writing to construct in a mode analogous to scientific inquiry models for the exploration of core laws processes and dynamics in the human mind Marco Bernini integrates models problems and interpretive frameworks from contemporary narrative theory cognitive sciences phenomenology and philosophy of mind to make a case for Beckett s modeling practice of a vast array of processes

including the narrative illusion of a sense of self the hallucinatory quality of inner speech the dialogic interaction with memories and felt presences the synesthetic nature of inner experience and mental imagery the developmental cooperation of language and locomotion the role of moods and emotions as cognitive drives the layered complexity of the mind and the emergent quality of consciousness Beckett and the Cognitive Method also reflects on how Beckett's fictional cognitive models are transformed into reading auditory or spectatorial experiences generating through narrative devices insights on which the sciences can only discursively or descriptively report As such the study advocates for their relevance to the contemporary scientific debate towards an interdisciplinary co modeling of cognition

The Body, Embodiment, and Education Steven A. Stolz, 2021-09-28 Notions of the body and embodiment have become prominent across a number of established discipline areas like philosophy sociology and psychology While there has been a paradigmatic shift towards this topic there is a notable gap in the literature as it relates to education and educational research The Body Embodiment and Education addresses the gap between embodiment and education by exploring conceptualisations of the body and embodiment from interdisciplinary perspectives With contributions from international experts in philosophy sociology and psychology as well as emerging areas in related fields such as embodied cognition neuroscience cognitive science this book sets a new research agenda in education and educational research Each chapter makes a case for expanding the field and adds to the call for further exploration The Body Embodiment and Education will be of great interest to academics researchers and postgraduate students who are interested in the body and embodiment and or its relationship with education or educational research

Crossing the Stream, Leaving the Cave Amber D. Carpenter, Pierre-Julien Harter, 2024 Crossing the Stream Leaving the Cave brings philosophers from two of the world's great philosophical traditions Platonic and Indian Buddhist into joint inquiry on topics in metaphysics epistemology mind language and ethics An international team of scholars address selected questions of mutual concern to Buddhist and Platonist How can knowledge of reality transform us Will such transformation leave us speechless or disinterested in the world around us What is cause What is self knowledge And how can dreams shed light on waking cognition What do the paradoxes thrown up by abstract thought about fundamental notions such as being and unity reveal Is it possible to attain unity in ourselves and should we even try Would doing so make us happy and is such happiness consistent with both contemplation of reality and action in the world With close readings of texts by Buddhaghosa Nagarjuna Vasubandhu Dignaga Bhaviveka Santideva by Plato Plotinus Porphyry Olympiodorus and Damascius among others these studies consider not just the different answers Buddhists and Platonists might give to these questions but also the criticisms they might bring to each other's positions the sort of arguments they use and the use they put these arguments to Bringing Platonic and the Buddhist perspectives jointly to bear creates a cosmopolitan philosophical exchange which yields greater conceptual clarity on the questions and the terms in which they are cast reveals unnoticed conceptual connections and opens up new possibilities for addressing central philosophical concerns

Lucrecia the Dreamer Kelly Bulkeley,2018-02-27 Set in late sixteenth century Spain this book tells the gripping story of Lucrecia de Le n a young woman of modest background who gained a dangerously popular reputation as a prophetic dreamer predicting apocalyptic ruin for her country When Lucrecia was still a teenager several Catholic priests took great interest in her prolific dreams and began to record them in detail But the growing public attention to the dreams eventually became too much for the Spanish king Stung that Lucrecia had accurately foreseen the defeat of the Spanish Armada in 1588 Philip II ordered the Inquisition to arrest her on charges of heresy and sedition During Lucrecia s imprisonment trial and torture the carefully collected records of her dreams were preserved and analyzed by the court The authenticity of these dreams and their potentially explosive significance became the focal point of the Church s investigation Returning to these records of a dreamer from another era *Lucrecia the Dreamer* is the first book to examine Lucrecia s dreams as dreams as accurate reports of psychological experiences with roots in the brain s natural cycles of activity during sleep Using methods from the cognitive science of religion dream researcher Kelly Bulkeley finds meaningful patterns in Lucrecia s dreaming prophecies and sheds new light on the infinitely puzzling question at the center of her trial a question that has vexed all religious traditions throughout history How can we determine if a dream is or is not a true revelation

The Difference Nothing Makes Brian D. Robinette,2023-02-15 This book explores the doctrinal social and spiritual significance of a central yet insufficiently understood tenet in Christian theology creation from nothing In this original study Brian D Robinette offers an extended meditation on the idea of creation out of nothing as it applies not only to the problem of God but also to questions of Christology soteriology and ecology His basic argument is that creatio ex nihilo is not a speculative doctrine referring to cosmic origins but rather a foundational insight into the very nature of the God world relation one whose implications extend throughout the full spectrum of Christian imagination and

practice In this sense it serves a grammatical role it gives orientation and scope to all Christian speech about the God world relation In part 1 Robinette takes up several objections to creatio ex nihilo and defends the doctrine as providing crucial insights into the gifted character of creation Chapter 2 underscores the contemplative dimensions of a theological inquiry that proceeds by way of unknowing Part 2 draws from the field of mimetic theory in order to explore the creative and destructive potential of human desire Part 3 draws upon the Christian contemplative tradition to show how the dark night of faith is a spiritually patient and discerning way to engage the sense of divine absence that many experience in our post religious post secular age The final chapter highlights creatio ex nihilo as an expression of divine love God s love for finitude for manifestation for relationship Throughout Robinette engages with biblical patristic and contemporary theological and philosophical sources including among others Ren Girard Karl Rahner and Sergius Bulgakov *Becoming Collingwood* Spencer Kiefer Wertz,2024-09-20 How did Collingwood become Collingwood It is by thinking through the nature of persons art play history archaeology anthropology ideas perceptions consciousness logic of question and answer realism race and understanding David Hume Collingwood had skirmishes with Margaret Hattersley Bulley on art Jean Antheme Brillat Savarin on taste on food George Herbert Mead on history and others along the way These became chapters in this book and you can follow along on this journey *The Life of Imagination* Jennifer Anna Gosetti-Ferencei,2018-10-30 Imagination allows us to step out of the ordinary but also to transform it through our sense of wonder and play artistic inspiration and innovation or the eureka moment of a scientific breakthrough In this book Jennifer Anna Gosetti Ferencei offers a groundbreaking new understanding of its place in everyday experience as well as the heights of creative achievement The Life of Imagination delivers a new conception of imagination that places it at the heart of our engagement with the world thinking acting feeling making and being Gosetti Ferencei reveals imagination s roots in embodied human cognition and its role in shaping our cognitive ecology She demonstrates how imagination arises from our material engagements with the world and at the same time endows us with the sense of an inner life how it both allows us to escape from reality and aids us in better understanding it Drawing from philosophy cognitive science evolutionary anthropology developmental psychology literary theory and aesthetics Gosetti Ferencei engages a spectacular range of examples from ordinary thought processes and actions to artistic scientific and literary feats to argue that like consciousness itself imagination resists reductive explanation The Life of Imagination offers a vital account of transformative thinking that shows how imagination will be essential in cultivating a future conducive to human flourishing and to that of the life around us **The Meditative Path to Health** Manmohan Chaturvedi,2025-06-10 This book by Dr Chaturvedi attempts to explore the intersection of two revolutionary scientific perspectives the placebo effect as a demonstration of the mind s healing capacity and telomere biology as a measurable indicator of cellular ageing and renewal By weaving these concepts together through the practice of meditation he delineates a pathway to not just manage stress or find momentary peace but potentially influence the very mechanisms

that determine how our cells age and regenerate Meditation serves as a perfect bridge between the placebo effect and telomere biology because the mind body connection has been known to researchers for a long time and meditation is a known technique to influence mind in a deliberate manner When we integrate these scientific perspectives a new paradigm emerges the mind as medicine This isn't merely positive thinking or wishful visualization Rather it's the recognition that consciousness itself may be a biological force one that can influence gene expression modulate immune function regulate stress responses and potentially even affect how our cells age This perspective doesn't diminish the value of conventional medical treatments Instead it suggests that our internal mental environment creates a biological context that can either amplify or diminish the effectiveness of any intervention whether pharmaceutical surgical or lifestyle based The value of this book lies in suggesting meditation as a way of life to help us maintain a good physical and mental health using the emerging research findings in biology and psychiatry I wish this book a success in helping the reader towards a healthy and long life by adopting simple to practice lifestyle changes Dr Alok Pandey MD Psychiatry Dr Alok Pandey is a medical doctor specifically a psychiatrist based in Pondicherry He is a well known figure associated with the Sri Aurobindo Ashram He has a strong interest in Sri Aurobindo and the Mother's teachings particularly in the fields of yoga psychology education and health

and Perceiving Dustin Stokes, 2021-05-26 Human beings are in contact with the world through their minds One can make sensory perceptual contact with the world One sees the tree and hears its leaves flutter And one makes cognitive contact with the world One forms beliefs about the tree memories of how it was in the past and expectations of how it will be in the future Can the first perception be influenced in important ways by the second cognition Do cognitive states such as memories beliefs and expectations affect what one perceives through the senses And what is the importance of these possible relations to how we theorize and understand the human mind Possible cognitive influence on perception sometimes called cognitive penetration of perception has been long debated in philosophy of mind and cognitive science Some argue that such influence occurs while others argue that it does not or cannot In this excellent introduction and overview of the problem Dustin Stokes examines the following The philosophical and scientific background to cognition and perception Contemporary ways of distinguishing cognition and perception Questions about the representational content of perception versus cognition Distinct theories of mental architecture modularity versus malleability Consequences for epistemology philosophy of science and aesthetics Philosophical and scientific research on perceptual attention Perceptual skill learning and expertise Perceptual content objectivity and cultural bias Additional features such as chapter summaries suggestions for further reading and a glossary make Thinking and Perceiving an ideal resource for students of philosophy of mind and psychology cognitive psychology and cognitive science

The Physical Signature of Computation Neal G. Anderson, Gualtiero Piccinini, 2024-07-12 In The Physical Signature of Computation Neal Anderson and Gualtiero Piccinini articulate and defend the robust mapping account the most systematic rigorous and comprehensive account of computational implementation to date Drawing in part from recent results in physical information theory they argue that mapping accounts of implementation can be made adequate by incorporating appropriate physical constraints According to the robust mapping account the key constraint on mappings from physical to computational states the key for establishing that a computation is physically implemented is physical computational equivalence evolving physical states bear neither more nor less information about the evolving computation than do the computational states they map onto When this highly nontrivial constraint is satisfied among others that are spelled out as part of the account a physical system can be said to implement a computation in a robust sense which means that the system bears the physical signature of the computation Anderson and Piccinini apply their robust mapping account to important questions in physical foundations of computation and cognitive science including the alleged indeterminacy of computation pancomputationalism and the computational theory of mind They show that physical computation is determinate nontrivial versions of pancomputationalism fail and cognition involves computation only insofar as neurocognitive systems bear the physical signature of specific computations They also argue that both consciousness and physics outstrip computation

Access and Mediation Maren Wehrle, Diego D'Angelo, Elizaveta Solomonova, 2022-02-07 Recent years have seen a rise in interdisciplinary approaches to the study of the mind However relatively little emphasis has

been placed on attention its functions and phenomenology As a result there are a multitude of definitions and explanatory frameworks that describe what attention is what it does and how it works This volume proposes that one way to discuss attention is by utilizing an integrative multidisciplinary framework that takes into consideration aspects of attention as a means of accessing the world and as a mediator of experience It brings together contributions from cognitive science philosophy and psychology in order to shed light on these aspects of attention By including both theoretical and empirical approaches to attention this volume will provide 1 an innovative framework for examining attention as something that mediates experience and 2 new perspectives on foundational and definitional issues of what attention is and how it contributes to our ability to access the world By drawing together different disciplines this volume broadens the concept of attention It opens up a new way of looking at attention as an active process through which the world is disclosed for us

Mind Beyond Brain David E. Presti, 2018-10-02 Among the most profound questions we confront are the nature of what and who we are as conscious beings and how the human mind relates to the rest of what we consider reality For millennia philosophers scientists and religious thinkers have attempted answers perhaps none more meaningful today than those offered by neuroscience and by Buddhism The encounter between these two worldviews has spurred ongoing conversations about what science and Buddhism can teach each other about mind and reality In *Mind Beyond Brain* the neuroscientist David E Presti with the assistance of other distinguished researchers explores how evidence for anomalous phenomena such as near death experiences apparent memories of past lives apparitions experiences associated with death and other so called psi or paranormal phenomena including telepathy clairvoyance and precognition can influence the Buddhism science conversation Presti describes the extensive but frequently unacknowledged history of scientific investigation into these phenomena demonstrating its relevance to questions about consciousness and reality The new perspectives opened up if we are willing to take evidence of such often off limits topics seriously offer significant challenges to dominant explanatory paradigms and raise the prospect that we may be poised for truly revolutionary developments in the scientific investigation of mind *Mind Beyond Brain* represents the next level in the science and Buddhism dialogue Modern Buddhist and Christian Mysticism Charles M. Mueller, Peter Richardson, 2025-03-01 Investigations of mysticism often focus on the past while largely ignoring current developments This book contributes to a reversal of that trend with a rigorous examination of a wide selection of contemporary Buddhist and Christian authors The focus is on the intriguing intersections and subtle divergences now emerging in areas such as ineffability nonconceptuality paradox inverted agency unity and self dissolution The analysis combines the theoretical framework of Cognitive Linguistics with a range of methodological approaches from discourse and thematic analysis to corpus linguistics Wide ranging systematic and informative the book is invaluable to all of those interested in the phenomenon of mysticism within the modern world
