Wood Chemistry and Wood Biotechnology Monica Ek, Göran Gellerstedt, Gunnar Henriksson, 2009-12-15 This four volume set covers the entire spectrum of pulp and paper chemistry and technology from starting material to processes and products including market demands This work is essential for all students of wood science and a useful reference for those working in the pulp and paper industry or on the chemistry of renewable resources Volume 1 provides a survey of the biological and chemical structure of wood as well as an introduction to the chemical reactions used during pulp production processes The work presents the different raw materials used for pulp production the macroscopic and morphological construction of wood and related characterization methods the chemical structure and arrangement of the wood polymers and extractives biosynthesis of wood polymers carbohydrate and lignin analysis reactions of wood polymers in mechanical and chemical pulping and bleaching processes biotechnical processes of relevance for the pulp and paper industry different types of microorganisms and their modes of interaction with wood the impact of chemical and microbiological processes on the hierarchical structure of wood and pulp *Wood Chemistry and Wood Biotechnology* Walter De Gruyter

Incorporated, 2009-12-15 The production of forestry products is based on a complex chain of knowledge in which the biological material wood with all its natural variability is converted into a variety of fiber based products each one with its detailed and specific quality requirements This four volume set covers the entire spectrum of pulp and paper chemistry and technology from starting material to processes and products including market demands Supported by a grant from the Ljungberg Foundation the Editors at the Royal Institute of Technology Stockholm Sweden coordinated over 30 authors from university and industry to create this comprehensive overview This work is essential for all students of wood science and a useful reference for those working in the pulp and paper industry or on the chemistry of renewable resources

**Biochemistry and Molecular Biology of Wood** Takayoshi Higuchi, 1996-12-11 The biochemistry and molecular biology of wood is important to elucidate the characteristics of wood as a biomaterial For the understanding of the properties of wood and wood components it is necessary to investigate the characterization of genes encoding enzymes involved in the biosynthesis of wood components the differentiation of the cambium into phloem and xylem and the mechanisms of the expression of these genes The author gives an overview of the rapidly progressing research in the relatively new field of molecular biology of trees and wood
