Digital Professionalism in Health and Care: Developing the Workforce, Building the Future Philip Scott, John Mantas, Arriel Benis, Ivana Ognjanovic, Kaija Saranto, Andrew Ware, Ian Wells, 2022-09-15. Digital technology has become integral in the fields of health and care and a number of recent reports have stressed the importance of equipping health and care staff with the skills and knowledge they need to use such technology effectively. Numerous failures of digital projects in the health and care sectors have demonstrated that simply relocating IT generalists into these specialist fields is not a guaranteed formula for success. The unique complexities of the typically under resourced legacy infrastructures of health and care create challenges that demand specific education and training. This book presents the proceedings of the European Federation for Medical Informatics (EFMI) 2022 Special Topic Conference (STC) held in Cardiff, Wales on 7-8 September 2022. The theme of STC 2022 was Digital Professionalism in Health and Care: Developing the Workforce, Building the Future, which emphasized the vital need for professional education, training and continuing

development of the health and care informatics workforce The 30 full papers and 5 posters in this book cover a broad range of topics and methods in informatics education and training and include a small selection from the wider sub domains of biomedical informatics Providing a valuable overview of current methods and training the book will be of interest to a wide range of professionals working in healthcare today especially those involved in equipping the workforce with the skills they will need for the digital future Encyclopedia of Information Technology Curriculum Integration Tomei, Lawrence A.,2008-02-28 As more and more universities schools and corporate training organizations develop technology plans to ensure technology will directly benefit learning and achievement the demand is increasing for an all inclusive authoritative reference source on the infusion of technology into curriculums worldwide The Encyclopedia of Information Technology Curriculum Integration amasses a comprehensive resource of concepts methodologies models architectures applications enabling technologies and best practices for integrating technology into the curriculum at all levels of education Compiling 154 articles from over 125 of the world s leading experts on information technology this authoritative reference strives to supply innovative research aimed at improving academic achievement teaching and learning and the application of technology in schools and training environments
