The software enables users to synthesize singing by typing in lyrics and melody. It uses synthesizing technology with specially recorded vocals of voice actors or singers. To create a song the user must input the melody and lyrics. A piano roll type interface is used to input the melody and the lyrics can be entered on each note. The software can change the stress of the pronunciations add effects such as vibrato or change the dynamics and tone of the voice. Each Vocaloid is sold as a singer in a box designed to act as a replacement for an actual singer. The software is available in English and Japanese although a Chinese version was produced for Sonika. The software is intended for professional musicians as well as light computer music users and has so far sold on the idea that the only limits are the users own skills.
