

A photograph of a tortoise, likely a Galapagos tortoise, resting on a large, dark, mossy rock. The tortoise has a large, patterned shell with brown and black markings. Its head and front legs are visible, and it appears to be looking towards the left. The background is a blurred natural environment with green foliage and trees.

Tortoise Husbandry and Welfare Jane Williams,2024-12-20

Keeping captive tortoises healthy and well is a significant challenge Because they are ectotherms these reptiles are totally dependent upon external sources to maintain body temperature and therefore metabolic function Their physical environment is vital for them to remain healthy and as owners we have to provide sufficient choice in the environment for them to be able to experience as near optimum conditions as we can Written by a leading clinical animal behaviourist this book is an important read for anyone involved in tortoise welfare from students and zoo rescue staff to pet owners and the veterinarians advising them

The Ecology, Exploitation and Conservation of River Turtles Don Moll,Edward O. Moll,2004-04-08 The underlying theme of this book is that a widespread taxonomically diverse group of animals important both from ecological and human resource perspectives remains poorly understood and in decline while receiving scant attention from the ecological and conservation community This volume proposes a comprehensive overview of the world's river turtles ecology conservation and management It begins with a categorization of taxa which inhabit flowing water habitats followed by information on their evolutionary and physical diversity and biogeography Within the framework of ecology the authors

discuss the composition of river turtle communities in different types of lotic habitats and regions population dynamics movements reproductive characteristics and behavior predators and feeding relationships In a conservation and management section the authors identify and evaluate the nature and intensity of factors which threaten river turtle survival almost all of which involve direct human exploitation or indirect effects of human induced habitat alteration and degradation They then list and evaluate the various schemes which have been proposed or employed to halt declines and restore populations and make recommendations for future management plans for specific species and regions In closing they state their viewpoint concerning future research directions and priorities and an evaluation of future prospects for survival of the world s river turtle species
