Handbook of Nonverbal Assessment R. Steve McCallum,2013-06-29 Psychologists educators and related health care professionals spend an enormous amount of time and energy evaluating the abilities of children and adults they serve Assessment may be tailored to determine cognitive strengths and weaknesses academic progress the effects of central nervous system trauma personality and so on For many children and adults traditional verbally laden instruments cannot be used For example individuals who have speech and or language deficits hearing impairments emotional problems and those from other cultures cannot be evaluated with tests that rely on standard English Our culture is becoming increasingly diverse as a result schools and mental health professionals are required to serve an increasingly large community of nontraditional learners Because many of these individuals cannot be evaluated fairly by language loaded tests there is a need to use techniques and tools that are language free or can be adapted or modified to minimize the effect of language For these individuals language is a barrier to assessment rather than a vehicle The primary goal for the contributors to the Handbook of Nonverbal Assessment is to describe the most current assessment strategies and related best practices to professionals who serve individuals from diverse cultures or those who have difficulty using the English language such professionals include school psychologists special educators speech and hearing specialists rehabilitation coun and so on

A Practical Guide to Autism Fred R.

Volkmar, Lisa A. Wiesner, 2009-08-17 Autism is in the public spotlight now more than ever as new research and information appears almost daily. Although in many ways this is a positive development, it also presents challenges to families and practitioners who want to keep up with the latest developments and are left to sift through new information by themselves to see what is credible and relevant for them. Each of us needs a personal research assistant who can determine which information we need to pay attention to and let us know how it might affect our daily work and the children we are living with or serve. Since we each don't have our own research assistants on staff, I am delighted to recommend this wonderful book by Fred Volkmar and Lisa Wiesner. Both of these talented professional leaders have combined their scientific skills and understanding of the field with great practical experience and ideas about how research can be translated into clinical practice. The result is a book that provides the best and most comprehensive information about recent scientific developments and a splendid practical guide for how they are being implemented and what we are learning in the process. The issues are presented in all of their complexity but translated into language that is clear, direct, and easy to follow. The format also lends itself to understanding the complex issues and their implications through excellent charts, question and answer sections, and chapters that vary from describing diagnostic issues to stating very specifically how to expand and evaluate the services one is receiving. The comprehensive references and lists of additional resources also add greatly to the overall package. As a professional dedicated to understanding scientific advances and helping families and teachers to utilize them most effectively, I am very pleased to have an ally like this book available. I am very grateful to the authors for providing a very credible, practical, and relevant addition to our field to help the many advocates and family practitioners to better understand the exciting new developments and how they can be implemented in our day-to-day work. Those taking the time to read through this superb volume will find it time well spent that pays back dividends in many different ways.
