The Empire of Disgust Zoya Hasan,Aziz Z. Huq,Martha C. Nussbaum,2018-08-16 All known societies exclude one or more minority groups frequently employing a rhetoric of disgust to justify stigmatization For instance in European anti Semitism Jews were considered hyper physical and crafty some upper caste Hindus find the lower castes dirty and untouchable and people with physical disabilities have been considered subhuman and repulsive Exclusions vary in their scope and also in the specific disgust ideologies underlying them In The Empire of Disgust scholars present an interdisciplinary and comparative study of varieties of stigma and prejudice in India and USA along the axes of caste race gender identity age sexual orientation disability ethnicity religion and economic class pervading contemporary social and political life In examining these forms of stigma and their intersections the contributors present theoretically pluralistic and empirically sensitive accounts that explain group based stigma and suggest forward looking remedies including group resistance to subordination as well as institutional and legal change equipped to eliminate stigma in its multifaceted forms

Analysis of Creationism in the United States from Scopes (1925) to Kitzmiller (2005) and its Effect on the Nation's Science Education System Elizabeth Watts,2018 Creationism is based on a fundamental belief in the inerrancy of the bible and negatively affects science education because creationist proponents insist on the inclusion of supernatural explanations for the appearance of species in particular the origin of humans This detrimental effect on education is particularly relevant in the United States where almost 70% of the population rejects the idea of naturalistic evolution and

the majority of American students struggle to meet the college readiness benchmarks in science and math This dissertation provides a comprehensive look at the issue from historical judicial and educational perspectives Twenty four legal cases in the United States regarding anti evolutionary strategies were analyzed in detail Strategic trends were identified ranging from the statewide banning of evolution in public schools to the required teaching of Creation Science The exact effect of creationist political activity was discerned through the analysis of state science standards and textbook adoption processes which illustrated the creationists ability to lobby for a diminished coverage of evolution in science standards and textbooks It was found that despite attempts made by scientific and educational agencies to provide guidelines such as the Next Generation Science Standards the majority of American state science standards continue to be sub par and one of the major flaws of these standards is the overall attempt to weaken the coverage of evolution throughout the standards A similar loss of quality occurs in textbooks since publishers engage in self censorship in order to avoid controversial topics such as evolution in order to prevent their books from being rejected An examination of the free choice learning materials revealed that creationist proponents are very active and successful in producing books films and museums for the sole purpose of promoting creationism Moreover a brief look at the creationist movement in Germany provided a powerful comparison to the United States and elucidated the key components necessary for a creationist movement to exist and flourish namely the presence of fundamentalist willing to fight to get anti evolutionary materials introduced into science classrooms This study provides new insights into the creationist phenomenon present not only in the United States but also increasingly present in European countries such as Germany Understanding the detrimental link between creationism and science education will help the science community realize that this topic needs to be continually readdressed and that it is imperative that these creationist trends are not dismissed as inconsequential

Complex Knowledge for Innovation in Economic and Social Development Rafael M. Gutierrez, 2024-10-31 The solution to the significant modern problems that impede the development of human society demands a cultural evolution based on knowledge All the necessary disciplinary tools already exist it is only essential to organize them into a coherent interdisciplinary complexity encompassing natural social and human sciences However ignorance in its most modern forms conveniently disperses the diversity of disciplinary knowledge transforming complementary differences into conflicts the potential of diversity into the injustice of prejudice and the power of complexity into the realm of complication Human beings have the capacity to imagine and innovate their own future to solve and dissolve with enlightenment the problems they have created in their ignorance to liberate themselves and take responsibility to develop values and to create a coherent and objective vision of the world They can imagine and build a synergy of personal and social futures developing both in a sustainable way Modern interdisciplinary knowledge clearly shows that the future of humanity can be bright if it manages to consistently integrate natural social and human knowledge overcoming the power of modern forms of ignorance that separate them and create artificial conflicts
