'Africa Forms the Key' Suryakanthie Chetty, 2021-01-04 This book examines the work of prominent South African geologist Alex Du Toit as a means of understanding the debate around continental drift both in segregation era South Africa and internationally It contextualises Du Toit's work within a particularly formative period of South African science from the paleoanthropological discoveries that sparked debates about the origins of humankind to Jan Smuts' own theory of holism Beyond South African scientific discoveries the book sets Du Toit's work against a backdrop of ideological struggles over space both domestically in terms of segregation and nationalism as well as internationally as South Africa sought to assert its position within the Commonwealth These debates were embodied by Du Toit's work on the theory of continental drift which put Africa and South Africa at the centre geologically and geographically The author also focuses on the divisions in geology caused by drift theory tracing the vigorous intellectual debate and dissent indicative of the ideological milieu within which scientific thought is constructed It traces the history of continental drift from its inception in the nineteenth century and later work of Alfred Wegener which was both elaborated upon and substantiated by Du Toit The study further focuses on Du Toit's research on continental drift in South African and South America and the geological fossil and climatological evidence used to bolster this theory **Earth**, 2010 Naples 1925 Martin Mittelmeier, 2024-11-12 The untold story of how the volcanic landscape surrounding Naples influenced a crucial moment in twentieth century intellectual history In the 1920s the Gulf of Naples was a magnet for European intellectuals in search of places as yet untouched by modernity Among the revolutionaries artists and thinkers drawn to Naples were numerous scholars at a formative stage in their journeys Walter Benjamin Siegfried Kracauer Alfred Sohn Rethel Asja Lacis Theodor W Adorno and many others While all were indelibly shaped by the

volcanic Neapolitan landscape it was Benjamin who first probed the relationship between the porous landscape and the local culture But Adorno went further transforming his surroundings into a radical new philosophy one that became a turning point in the modern history of the discipline In this ingenious book Martin Mittelmeier reveals the Gulf of Naples as the true birthplace of the Frankfurt School From the majestic crater rim of Mount Vesuvius to the soft volcanic rock that Neapolitans used to build their city Mittelmeier follows Adorno's and his fellow thinkers footsteps through the cities along the gulf demonstrating how their observations and encounters surface again and again in their writings for decades to come and serve as the structuring principle of Critical Theory
