

Microwaves

- Microwaves are a type of electromagnetic wave with frequencies between 300 MHz and 300 GHz
- They are widely used in cooking, as they heat food efficiently by exciting water molecules
- Besides culinary uses, microwaves are pivotal in telecommunications for data and voice transmission
- They also play a crucial role in radar technology, aiding in weather forecasting and navigation

Practical example: Microwave ovens

- Microwave ovens use microwaves, a type of electromagnetic radiation, to heat food
- These waves excite water molecules in food, causing them to vibrate rapidly and produce heat
- This process is known as dielectric heating and efficiently cooks food from the inside out
- Unlike conventional ovens, microwave ovens specifically target water molecules, which speeds up the cooking process significantly
