Aronow, John Arthur McClung, 2015-10-29 Translational Research in Coronary Artery Disease Pathophysiology to Treatment covers the entire spectrum of basic science genetics drug treatment and interventions for coronary artery disease With an emphasis on vascular biology this reference fully explains the fundamental aspects of coronary artery disease pathophysiology Included are important topics including endothelial function endothelial injury and endothelial repair in various disease states vascular smooth muscle function and its interaction with the endothelium and the interrelationship between inflammatory biology and vascular function By providing this synthesis of current research literature this reference allows the cardiovascular scientist and practitioner to access everything they need from one source Provides a concise summary of recent developments in coronary and vascular research including previously unpublished data Summarizes in depth discussions of the pathobiology and novel treatment strategies for coronary artery disease Provides access to an accompanying website that contains photos and videos of noninvasive diagnostic modalities for evaluation of coronary artery disease **Biomedical Translational Research** R.C. Sobti, Awtar Krishan Ganju, 2022-06-14 The second volume of the Biomedical translational research discusses advancements in biomedical research for understanding the pathophysiology of various diseases towards improving diagnosis and treatment It presents the integration of molecular based technologies clinical genomics and medical informatics to improve diagnostic and treatment strategies Further the book reviews molecular genomics approaches for diagnosis and managing tuberculosis It also covers the innovative strategies for cancer treatment through targeting metabolic pathways tumor microenvironment cancer stem cells and immune cells It also illuminates novel strategies for heart failure diagnosis and therapeutic approaches for the treatment of heart failure It discusses improvements in translational research for discovery of new diagnostic tests identifying novel biomarkers and drugable targets and predicting optimal treatments based on understanding the underlying molecular basis of the disease Lastly it reviews the preclinical models of restenosis and their application and limitation in the evaluation of device based interventional technologies for the treatment of coronary artery diseases Pathophysiology and Treatment of Atherosclerotic Disease in Peripheral Arteries Alope Virmani Finn, 2024-06-12 Pathophysiology and Treatment of Atherosclerotic Disease in Peripheral Arteries is a thorough review of the disease written by experts studying its detection and treatment These state of the art chapters summarize in a comprehensive manner emerging knowledge about this important area of medicine The pathophysiology and treatment of peripheral artery PAD disease remains poorly understood even by practitioners Often it is assumed that PAD should be treated in a similar fashion to coronary artery disease CAD when in fact recent data suggest a distinct pathophysiology with genetic risk having some but not complete overlap with CAD This is a novel reference of emerging data on the factors behind its development and progression detection and treatment suggest an emerging paradigm for this disease Provides understanding for the pathophysiology of PAD from pathologic and

molecular perspectives Reviews state of the art modalities for its detection as well as the data surrounding new medical and interventional treatment for PAD Elucidates the impact of new treatment modalities such as drug coated balloons and atherectomy devices such a lithotripsy
