Contemporary society is marked and defined by the ways in which mobile goods bodies vehicles objects and data are organized moved and staged Against the background of the mobilities turn this book articulates a new and emerging research field namely that of mobilities design The book revolves around the following research question How are design decisions and interventions staging mobilities It builds upon the Staging Mobilities model Jensen 2013 in an exploratory inquiry into the problems and potentials of the design of mobilities The exchange value between mobilities and design research is twofold To mobilities research this means getting closer to the material and to engage in the creative exploratory and experimental approaches of the design world which offer new potential for innovative research Design research on the other hand might enter into a fruitful relationship with mobilities research offering a relational and mobile design thinking and a valuable basis for design reflections around the ubiquitous structures spaces and systems of mobilities **Mobilities:**

New Perspectives on Transport and Society Professor John Urry,Professor Margaret Grieco,2012-11-28 Bringing together the leading authors currently working at the intersection of social science and transport science this volume provides a companion to the well established and extensive international Transport and Society series Each chapter and the volume as a whole offers closer and richer consideration of the issues practices and structures of multiple mobilities which shape the current world but which have typically been overlooked or minimised What this approach seeks to do is not only draw attention to many new areas of research and investigation relating to mobile lives but also to point to new theories and

methods by which such lives have to be researched and examined Such new theories and methods are relevant both to rethinking transport studies as such but are also recasting societal studies as transport so that it comes out of the ghetto and enters mainstream social science **The Routledge Handbook of Mobilities** Peter Adey,David Bissell,Kevin

Hannam,Peter Merriman,Mimi Sheller,2014-01-10 The 21st century seems to be on the move perhaps even more so than the last With cheap travel and more than two billion cars projected worldwide for 2030 And yet all this mobility is happening incredibly unevenly at different paces and intensities with varying impacts and consequences to the extent that life on the move might be actually quite difficult to sustain environmentally socially and ethically As a result mobility has become a keyword of the social sciences delineating a new domain of concepts approaches methodologies and techniques which seek to understand the character and quality of these trends This Handbook explores and critically evaluates the debates approaches controversies and methodologies inherent to this rapidly expanding discipline It brings together leading specialists from range of backgrounds and geographical regions to provide an authoritative and comprehensive overview of this field conveying cutting edge research in an accessible way whilst giving detailed grounding in the evolution of past debates on mobilities It illustrates disciplinary trends and pathways from migration studies and transport history to communications research featuring methodological innovations and developments and conceptual histories from feminist theory to tourist studies It explores the dominant figures of mobility from children to soldiers and the mobility impaired the disparate materialities of mobility such as flows of water and waste to the vectors of viruses key infrastructures such as logistics systems to the informal services of megacity slums and the important mobility events around which our world turns from going on vacation to the commute to the catastrophic disruption of mobility systems The text is forward thinking projecting the future of mobilities as they might be lived transformed and studied and possibly brought to an end

International in focus the book transcends disciplinary and national boundaries to explore mobilities as they are understood from different perspectives different fields countries and standpoints This is an invaluable resource for all those with an interest in mobility across disciplinary boundaries and areas of study *Ship* Gregory Votolato,2012-01-01 From oar powered quinqueremes to steam powered freighters to luxury ocean liners such as the Titanic to aircraft carriers like the Abraham Lincoln ships have played an integral role in trade transportation and war throughout history Today ships remain the largest and most expensive moving objects on the planet engineers and designers constantly push the limits of design creating vessels that continue to rival newer technologies such as airplanes and cars But unlike other more common modes of transportation the great ships of the world travel in the deep oceans out of sight and out of mind until that is something goes wrong In *Ship* Gregory Votolato explores the fiction and the reality of modern ships the technology that creates them and the events that can lead to disasters such as the Exxon Valdez or Amoco Cadiz Here Votolato delves into the world of the ship describing the unpredictable and often hostile environment of weather at sea the resurgent threats posed by pirates and

the responsibilities of captains and crews onboard Ship sbroad overview of technology and design also offers unique insights into this extraordinary result of human creativity Votolato s book will appeal to readers interested in the general design history of ships as well as their social political and technological impact on our modern world Advancing a Design Approach to Enriching Public Mobility Selby Coxon,Robbie Napper,2021-03-17 This book examines research at the intersection of design and public mobility from both an academic and practice perspective An eclectic collection of projects and topics not normally found in the mainstream literature on transportation from implementing gender sensitive design to examining how to reconceptualize future public interactions with mobility The book brings together leading thinkers in design and mobility from around the world and from different modal perspectives sharing insights into how we navigate the emerging public mobility landscape This collection is valuable for transport operators and practitioners seeking to better understand the impact design can have on public mobility and innovate in a rapidly changing operational environment

Transport Colin G. Pooley, 2017-05-19 This book provides an innovative perspective on migration mobility and transport. Using concepts drawn from migration history, mobilities studies and transport history, it makes the case for greater integration of these disciplines. The approach is historical, demonstrating how past processes of travel and population movement have evolved, examining the continuities and changes that have occurred and arguing that many of the concepts used in mobilities studies today are equally relevant to the past. The three central chapters view past population movements through respectively the lenses of migration history, mobilities studies and transport. Two further chapters demonstrate the diversity of mobility experiences and the opportunities and difficulties of applying this approach in teaching and research. Extensive case study material from around the world is used, including personal diaries which vividly recreate the everyday experiences of past mobilities. Population movement has never been of more importance globally; this book demonstrates how knowledge of past mobility experiences can inform our understanding of the present.

A Cultural History of Furniture in the Modern Age Claire I. R. O'Mahony, 2022-02-24 Furniture is a unique witness to the transformations of private and public experience amidst the upheavals of the 20th century: how we work, rest and play are determined by the embodied encounter with furniture, defining and projecting a sense of identity and status, responding to and exemplifying contrasting social conditions, political and economic motivations, aesthetic predilections and debates. Assessing physical and archival evidence drawn from a spectrum of iconic and under-represented case studies, an international team of design historians collaborate in this volume to explore key methodological questions about how the production, consumption and mediation of furniture reveal shifting cultural habits and histories across diverse contexts amidst modernity. Drawing upon a wealth of visual and textual sources, this volume of *A Cultural History of Furniture* presents essays that examine key characteristics of the furniture of the modern period on the themes of design and motifs, makers, making and materials, types and uses, the domestic setting, the public setting, exhibition and display, furniture and architecture, visual representations and verbal representations.

Car Gregory Votolato, 2015-06-15 Whether you drool over their horsepower or decry their emissions, the car is an important and ubiquitous part of nearly all of our lives. And the history of their design and the innovations of their technologies can tell us a lot about how our values and attitudes have changed. In this book, Gregory Votolato shows us how and why the automobile has become, since its rise in the late nineteenth century, at once an object of unparalleled popular desire and a hugely problematic emblem of the modern world. Votolato explores the ways that our love-hate relationship with the car has been intimately connected with car design. He tells the story of the rise of the private passenger car and all the psychological, social and economic functions it has come to serve beyond mere transportation. Introducing readers to the automotive design process, he traces the lifecycle of the car from the drawing board to the scrapyard, offering insights from key figures in the industry as well as a careful evaluation of the car's enormous environmental impact. At the same time, he looks at the many cultures tied into the automobile, from drag racing and customizing to the luxury coachcraft of the classic era. Along the way,

Indoor America Andrea Vesentini, 2018-11-27 Cars single family houses fallout shelters air conditioned malls these are only some of the many interiors making up the landscape of American suburbia Indoor America explores the history of suburbanization through the emergence of such spaces in the postwar years examining their design use and representation By drawing on a wealth of examples ranging from the built environment to popular culture and film Andrea Vesentini shows how suburban interiors were devised as a continuous cultural landscape of interconnected and self sufficient escape capsules The relocation of most everyday practices into indoor spaces has often been overlooked by suburban historiography Indoor America uncovers this latent history and contrasts it with the dominant reading of suburbanization as pursuit of open space Americans did not just flee the city by getting out of it they did so also by getting inside Vesentini chronicles this inner directed flight by describing three separate stages The encapsulation of the automobile fostered the nuclear segregation of the family from the social fabric and served as a blueprint for all other interiors Introverted design increasingly turned the focus of the house inward Finally through interiorization the exterior was

incorporated into the all encompassing interior landscape of enclosed malls and projects for indoor cities In a journey that features tailfin cars and World s Fair model homes Richard Neutra s glass walls and sitcom picture windows Victor Gruen s Southdale Center and the Minnesota Experimental City Indoor America takes the reader into the heart and viscera of America s urban sprawl
