Understanding Buildings A Multidisciplinary Approach:

Understanding Buildings a Multidisciplinary Approach E. Reid, 2013-11-04 This book meets the needs for a basic yet comprehensive and up to date introductory text to building technology for students in architecture and the other disciplines in building design The wide coverage is organised under the chapter headings structure enclosure climate services utility services lighting acoustics fire safety the future The treatment in each case is concentrated on the close relationship between good design practice and the basic underlying scientific and practical principles but stopping short of the high level theory which is to be found in other more closely specialised texts This well illustrated and highly readable book will be invaluable to the student and of interest to the practitioner too both in architecture and in its related technical fields

Understanding Buildings, 1984 This book was written mainly for aspiring architects and civil engineers and covers almost all types of building systems thoroughly It is very detailed and has separate chapters for important topics such as structure climate services lighting acoustics fire safety etc Although the author largely stays away from mathematics he is always clear and concise in dealing even with complex analytical problems As an example I would give his excellent treatment of two and three hinged portals and the fascinating parallels he draws between the engineering ideal of arches and the different types of portals He covers all major construction techniques from timber platform frame construction generally of houses to more complex forms such as the hyperbolic paraboloid opposed double curvature and the esoteric hyperboloid of revolution the opposed double curvature architecture almost always in concrete common in power station cooling towers His writing on accessory systems such as heating air conditioning ventilation and fire detection and prevention are both introductory and comprehensive In all areas from structure to systems he is careful to explain real world rationale in an approachable format that is both thorough and easy to understand

Building Structures Illustrated Francis D. K. Ching, Barry S. Onouye, Douglas Zuberbuhler, 2014-03-04 A new edition of Francis D K Ching's illustrated guide to structural design Structures are an essential element of the building process yet one of the most difficult concepts for architects to grasp While structural engineers do the detailed consulting work for a project architects should have enough knowledge of structural theory and analysis to design a building Building Structures

Illustrated takes a new approach to structural design showing how structural systems of a building such as an integrated assembly of elements with pattern proportions and scale are related to the fundamental aspects of architectural design. The book features a one stop guide to structural design in practice, a thorough treatment of structural design as part of the entire building process and an overview of the historical development of architectural materials and structure. Illustrated throughout with Ching's signature line drawings, this new Second Edition is an ideal guide to structures for designers, builders and students. Updated to include new information on building code compliance, additional learning resources and a new glossary of terms. Offers thorough coverage of formal and spatial composition, program fit, coordination with other building systems, code compliance and much more. Beautifully illustrated by the renowned Francis D K Ching. **Building Structures Illustrated Second Edition** is the ideal resource for students and professionals who want to make informed decisions on architectural design.

Building Pathology David S. Watt, 2025-06-30. Well illustrated introduction to building pathology bridging the gap between building surveying and the detailed understanding of building defects, their prognosis and remediation. Building Pathology introduces the concept of building pathology and aims to give the reader a greater awareness and understanding of buildings and their users to assist in defect diagnosis and the design and implementation of specific and appropriate remedial measures. By focusing on the process rather than specific solutions, the book helps the reader to use the information in their practice in a wide variety of situations. The new third edition features new case studies which have been integrated into the text. Written by a highly qualified author with significant experience in the field, the third edition of Building Pathology contains information on Building performance covering environmental factors, user requirements, building structures and materials, Defects, damage and decay covering atmospheric and climatic action, excess moisture, chemical, physical and biological action, movement, fire and human factors, Survey and assessment covering building inspections and surveys, how to prioritize defects, unoccupied buildings and sites and redundant and ruined buildings, Remediation in practice covering real world examples. With comprehensive coverage of the subject, Building Pathology is an essential learning resource for students of building surveying as well as professional architects, building surveyors, property managers and those working in heritage disciplines.

Conservation of Historic Buildings Bernard Feilden, 2007-06-07. Since its publication in 1982, Sir Bernard Feilden's Conservation of Historic Buildings has become the standard text for architects and others involved in the conservation of historic structures. Leading practitioners around the world have praised the book as being the most significant single volume on the subject to be published. This third edition revises and updates a classic book, including completely new sections on conservation of Modern Movement buildings and non-destructive investigation. The result of the lifetime's experience of one of the world's leading architectural conservators, the book comprehensively surveys the fundamental principles of conservation in their application to historic buildings and provides the basic information needed by architects, engineers and surveyors for the solution of problems of architectural conservation.

in almost every climatic region of the world This edition is organized into three complementary parts in the first the structure of buildings is dealt with in detail the second focuses attention on the causes of decay and the materials they affect and the third considers the practical role of the architect involved in conservation and rehabilitation As well as being essential reading for architects and others concerned with conservation many lay people with various kinds of responsibility for historic buildings will find this clearly written jargon free work a fruitful source of guidance and information

Energy and Sustainability V: Special Contributions C.A. Brebbia, S.S. Zubir, 2015-03-19 This volume contains special contributions presented at the 5th International Conference on Energy and Sustainability held by the Wessex Institute of Technology It is a companion to the Volume containing most of the contributions Vol 186 of WIT Transactions on Ecology and the Environment and comprises papers presented orally during the Conference The modern world is highly dependent on the exploitation of fossil fuels More recently resources depletion and severe environmental effects deriving from the continuous use of these fuels has resulted in an increasing amount of interest in renewable energy resources and the search for sustainable energy policies The changes required to progress from an economy mainly based on hydrocarbons to one taking advantage of sustainable energy resources are massive and require considerable scientific research as well as engineering systems The effect also involves collaboration between different disciplines in order to arrive at optimum solutions including buildings energy networks convenience systems new energy storage solutions waste to energy technologies and many others This book along with its companion volume covers topics related to sustainability in energy

and power production storage distribution and management These include Energy Policies Renewable Energy Resources Sustainable Energy Production Environmental Risk Management Green Buildings Energy Storage Biofuels Processing of Oil and Gas Drilling and Well Design CO₂ Capture and Management Pipelines Energy Efficiency Energy from Waste Energy and Transportation

Design and Nature VI S. Hernandez, C. A. Brebbia, 2012 Throughout history many leading thinkers have been inspired by the parallels between nature and human design in mathematics engineering and other areas Today the huge increase in biological knowledge developments in design engineering systems together with the growth in computer power and developments in simulation modelling have all made possible more comprehensive studies of nature Conference topics include the following Mechanics in nature Nature and architecture Natural materials and processes Solutions from nature Biomimetics and bio inspiration Biocapacity Education in design and nature Competition in nature Biological engineering Constructional theory Locomotion in nature Gravitational biology Self sustaining environments It is these developments which have prompted the reconvening of this international conference on Design and Nature It is intended that the meeting will bring together researchers from around the world working on a variety of studies involving nature and their significance for modern scientific thought and design

The Fundamentals of Interior Architecture John Coles, Naomi House, 2007-12-13 Each element or fundamental uses theory and contemporary and historical references to illustrate the richness and diversity of design practice The book contains five sections which together encapsulate the principle ideas skills and knowledge that are employed in the creation of spatial solutions that support the needs of the client and which recognize the qualities of the building and its situation Using illustrations and photographs these elements are identified and described in a way that makes them accessible to the reader

Energy and Sustainability C. A. Brebbia, Viktor Popov, 2007 The way in which our society exists operates and develops is strongly influenced by the way in which energy is produced and consumed No process in industry can be performed without a sufficient supply of energy and without industry there can be no production of commodities on which the existence of modern society depends Energy systems have evolved over a long period and more rapidly over the last two centuries as a response to the requirements of industry and society starting with the combustion of fuels and building up to the exploitation of nuclear energy and renewable resources It is clear that the evolution of energy systems is a continuous process which involves constant technological developments and innovation This book publishes papers presented at the First International Conference on Energy and Sustainability Featured topics include Energy
