

Understanding your zoning system.

Think of a Trane ComfortLink™ II zoning system as precise comfort on demand. Unlike conventional systems that can only heat or cool the entire house at once, a zoning system directs heated and cooled air on a zone-by-zone basis, allowing you to control each for customized comfort throughout.

During the summer, your Trane matched zoning system uses an air conditioner or heat pump to cool the air, and a variable-speed furnace or air handler to circulate it through your ductwork. Motorized modulating dampers can be installed within your new or existing ductwork to redirect cooled air where it's needed, keeping temperatures consistent throughout your house.

In winter, your Trane matched zoning system uses a heat pump or variable-speed furnace to warm the air, and an air handler or variable-speed furnace to move the air through the ductwork. Dampers direct this warm air where sensors determine it's most needed, giving you consistent heat, based on the set temperature in each customized zone of your home.

Zone Control

Monitor the temperatures in each zone of your home at a glance, and change them as needed with just a touch.

Zone Menu Screen

Access the most important zoning features all in one place.

Scheduling

A bright, clear scheduling interface makes it easy to use less energy when your home is unoccupied.

System Usage

A detailed history of your system's run times, broken down by zones, makes it easy to better plan your energy management.

When everything works together, the comfort can be amazing.

Connect your Trane ComfortLink™ II Control and zoning equipment to a perfectly matched Trane variable-speed indoor unit and multi-stage outdoor unit and you'll see for yourself. Every component is designed to work in harmony with the others, optimizing your comfort and energy use combined with the enhanced humidity control you'll only find with a Trane matched system.
