Engineers planning procedures The report finds that a key issue regarding planning decisions on these river systems is the ambiguity related to several different pieces of legislation and acts that govern river management and thus recommends that the administration and Congress clarify the federal intent for managing this river and waterway system The report recommends an independent retrospective review of the experience with a federal inter agency Principals Group which was convened to provide guidance to the Corps study It is also recommended that the Corps strive to incorporate flexible adaptive management principles through its entire water planning program including operations of the lock and dam system

Regulation of Weights, Lengths, and Widths of Commercial Motor Vehicles Transportation Research Board, 2005-07-14
TRB Special Report 267 Regulation of Weights Lengths and Widths of Commercial Motor Vehicles recommends the creation of an independent public organization to evaluate the effects of truck traffic pilot studies of new truck designs and a change in federal law authorizing states to issue permits for operation of larger trucks on the Interstates In 1991 Congress placed a freeze on maximum truck weights and dimensions Some safety groups were protesting against the safety implications of increased truck size and weight and the railroads were objecting to the introduction of vehicles they deemed to have an unfair advantage Railroads unlike trucking firms must pay for the capital costs of their infrastructure The railroads contend that large trucks do not pay sufficient taxes to compensate for the highway damage they cause and the environmental costs they generate Although Congress apparently hoped it had placed a cap on maximum truck dimensions in 1991 such has not proven to be the case Carriers operating under specific conditions have been able to seek and obtain special exceptions from the federal freeze by appealing directly to Congress without any formal review of the possible consequences thereby encouraging additional firms to seek similar exceptions In the Transportation Equity Act for the 21st Century Congress requested a TRB study to review federal policies on commercial vehicle dimensions The committee that undertook the study that resulted in Special Report 267 found that regulatory analyses of the benefits and costs of changes in truck dimensions are hampered by a lack of information Regulatory decisions on such matters will always entail a degree of risk and uncertainty but the degree of uncertainty surrounding truck issues is unusually high and unnecessary The committee concluded that the uncertainty could be alleviated if procedures were established for carrying out a program of basic and applied research and if evaluation and monitoring were permanent components of the administration of trucking regulations The committee recommended immediate changes in federal regulations that would allow for a federally supervised permit program The program would permit the operation of vehicles heavier than would normally be allowed provided that the changes applied only to vehicles with a maximum weight of 90 000 pounds double trailer configurations with each trailer up to 33 feet and an overall weight limit governed by the federal bridge formula Moreover enforcement of trucks operating under such a program should be strengthened and the permits should require that users pay the costs they occasion States should be free to choose whether to participate in the permit program Those that elected to do so would be required to have

in place a program of bridge management safety monitoring enforcement and cost recovery overseen by the federal government The fundamental problem involved in evaluating proposals for changes in truck dimensions is that their effects can often only be estimated or modeled The data available for estimating safety consequences in particular are inadequate and probably always will be Thus the committee that conducted this study concluded that the resulting analyses usually involve a high degree of uncertainty What is needed is some way to evaluate potential changes through limited and carefully controlled trials much as proposed new drugs are tested before being allowed in widespread use The committee recommended that a new independent entity be created to work with private industry in evaluating new concepts and recommending changes to regulatory agencies Limited pilot tests would be required which would need to be carefully designed to avoid undue risks and ensure proper evaluation Special vehicles could be allowed to operate under carefully controlled circumstances just as oversize and overweight vehicles are allowed to operate under special permits in many states Changes in federal laws and regulations would be required to allow states to issue such permits on an expanded network of highways under the condition that a rigorous program of monitoring and evaluation be instituted

Special Report 269 Summary *Modelling Soil Erosion, Sediment Transport and Closely Related Hydrological Processes* Wolfgang Summer, Eduard Klaghofer, Wei Zhang, 1998 Local Government Actions to Prevent Childhood Obesity National Research Council, Institute of Medicine, Transportation Research Board, Board on Population Health and Public Health Practice, Board on Children, Youth, and Families, Food and Nutrition Board, Committee on Childhood Obesity Prevention Actions for Local Governments, 2010-01-10 The prevalence of childhood obesity is so high in the United States that it may reduce the life expectancy of today's generation of children While parents and other adult caregivers play a fundamental role in teaching children about healthy behaviors even the most positive efforts can be undermined by local environments that are poorly suited to supporting healthy behaviors For example many communities lack ready sources of healthy food choices such as supermarkets and grocery stores Or they may not provide safe places for children to walk or play In such communities even the most motivated child or adolescent may find it difficult to act in healthy ways Local governments with jurisdiction over many aspects of land use food marketing community planning transportation health and nutrition programs and other community issues are ideally positioned to promote behaviors that will help children and adolescents reach and maintain healthy weights Local Government Actions to Prevent Childhood Obesity presents a number of recommendations that touch on the vital role of government actions on all levels federal state and local in childhood obesity prevention The book offers healthy eating and physical activity strategies for local governments to consider making it an excellent resource for mayors managers commissioners council members county board members and administrators

Assessing and Managing the Ecological Impacts of Paved Roads National Research Council, Transportation Research Board, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Ecological Impacts of Road Density, 2006-01-22 All

phases of road development from construction and use by vehicles to maintenance affect physical and chemical soil conditions water flow and air and water quality as well as plants and animals Roads and traffic can alter wildlife habitat cause vehicle related mortality impede animal migration and disperse nonnative pest species of plants and animals Integrating environmental considerations into all phases of transportation is an important evolving process The increasing awareness of environmental issues has made road development more complex and controversial Over the past two decades the Federal Highway Administration and state transportation agencies have increasingly recognized the importance of the effects of transportation on the natural environment This report provides guidance on ways to reconcile the different goals of road development and environmental conservation It identifies the ecological effects of roads that can be evaluated in the planning design construction and maintenance of roads and offers several recommendations to help better understand and manage ecological impacts of paved roads
